SUMMARY

AI Full-stack software engineer with 3+ years building scalable cloud applications. Expertise in microservices architecture, CI/CD pipelines, Kubernetes orchestration, and enterprise SaaS. Proven track record of designing reliable, multi-tenant services processing millions of events across distributed systems.

WORK EXPERIENCE

Senior Developer

April 2025 – Present

SAP Labs India – Bangalore

- Designed and deployed **containerized microservices** on Kubernetes (Kyma) using Docker—built CI/CD pipelines with GitHub Actions for automated testing, image builds, and production deployments.
- Built **multi-tenant SaaS platform** for contract lifecycle management using Java, Spring Boot, and Apache Kafka—implemented tenant isolation, event-driven architecture, and resilient service communication.
- Created generic **OData client framework** with connection pooling and BTP Destination Service integration—enabled consistent API consumption across 4 SAP S/4HANA services.

Developer

April 2024 – March 2025

SAP Labs India – Bangalore

- Architected **5-stage ETL pipeline** with Celery and Redis for async document processing—scaled to handle 10,000+ requests across 1,000+ chatbot deployments with fault-tolerant retry mechanisms.
- Built **Jenkins CI/CD pipelines** for automated builds, testing, and deployments—created VitePress documentation enabling teams to independently maintain and extend platform capabilities.
- Integrated Microsoft Graph API with MSAL authentication for SharePoint connectivity—designed secure credential management and token refresh workflows for enterprise document access.

Associate Developer

Aug 2022 – March 2024

SAP Labs India – Bangalore

- Developed **Node.js/Express microservices** with PostgreSQL backend—implemented user management, session handling, and GDPR-compliant data processing serving 200+ users.
- Built **cloud service integrations** with Azure Cognitive Services and AWS S3—designed reliable async pipelines for media processing with error handling and monitoring.
- Created **React frontend** with real-time WebSocket connections—implemented state management and responsive UI across multiple deployment environments.

Software Engineer Intern

May 2022 – July 2022

Peakflo (Fintech)

- Built **dynamic pricing calculator** integrated with payment volume APIs—enabled real-time pricing adjustments directly within revenue operations workflows.
- Enhanced search and filtering functionality with optimized database queries for payment management across customer segments.

KEY PROJECTS

S/4HANA Reference Agents

Python, LangGraph, Docker, Kubernetes/Kyma, GitHub Actions

- Developed enterprise agents serving as reference implementations for SAP Joule—created Business Partner Agent and Procurement Intelligence Agent, exposed SAP S/4HANA APIs as MCP Servers.
- Designed A2A Protocol, configured CI/CD pipeline using GitHub Actions automating Docker image builds and Kyma/Kubernetes deployments with OpenTelemetry instrumentation for monitoring.

Enterprise AI Microservice (Procurement AI)

Java, Spring Boot, SAP AI Core, Kafka, BTP

- Built **job scheduling infrastructure** for automated data grounding—implemented clean interface separation with HTTP client abstraction and async Spring Boot processing for BTP Job Scheduler Service.
- Developed **multi-tenant contract AI service**—implemented Kafka consumers for real-time indexing, tenant-aware event processing, and SAP AI Core SDK integration for LLM orchestration and RAG.

EDUCATION

Indian Institute of Technology, Kanpur

B.Tech in Electrical Engineering (GPA: 8.5/10)

2018 – 2022

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, C++

Cloud & DevOps: Kubernetes/Kyma, Docker, GitHub Actions, Jenkins, CI/CD Pipelines, Azure, AWS, SAP BTP

Backend: Spring Boot, FastAPI, Express, Node.js, REST APIs, OData, GraphQL, Microservices

Data & Messaging: PostgreSQL, SAP HANA, Redis, Apache Kafka, Celery, ETL Pipelines

Frontend: React, TypeScript, Electron, WebSockets, HTML/CSS
