EDUCATION

IIT Kanpur

GPA 8.1/10

Bachelor of Technology, Mechanical Engineering

WORK EXPERIENCE

Senior Software Applications Engineer

Jun'22 – Present

Oracle India Pvt. Ltd.

- Own full-stack delivery of two enterprise talent management products — **Succession Management** and **Talent Review** — serving **400+ business customers**, covering UI, backend, **REST APIs**, data models, and production reliability.
- Independently scoped and delivered **30+ product features** end-to-end — from API and data-model design through testing and release — consistently meeting tight delivery timelines as short as **3–4 days**.
- Designed, built, and shipped a customer-facing **AI agent** for the Succession Management product on **Oracle AI Studio**: LLM-driven natural-language workflows — succession plan creation, team succession status queries, and criticality analysis — backed by a custom tool-calling API layer, with explicit handling for when model output needed correction or guardrails.
- Built and maintained **Docker** images/containers used by the development team for local testing and debugging, standardizing environment setup and reproducibility across the team.
- Orchestrated the migration of the **entire product** from a legacy Java-based system to a modern web architecture, modernizing the platform for enterprise customers.
- Delivered a critical **date-and-time** enhancement to the Talent Review **meeting date** field, evolving the underlying DB column from date-only to timestamp via a **Modify Column Strategy** on **Oracle Edition-Based Redefinition (EBR)** — a **zero-downtime** schema-change pattern that migrated production data with no service interruption.

Project Intern (Pre-Placement Offer)

Jun'21 – Jul'21

Oracle India Pvt. Ltd.

- Designed and implemented conversation flows within a **chatbot** to enhance user experience through intuitive interactions across multiple functionalities.
- Utilized **REST APIs** to retrieve and display data within the chat interface, providing users with timely and relevant information.
- Managed chatbot development from inception to completion, including comprehensive documentation, within a challenging **four-week timeline**.

PROJECTS

DistriKV — Distributed Key-Value Store

Go, Docker

- Built a thread-safe, replicated key-value store in **Go** — leader-follower architecture, synchronous replication over HTTP/JSON with per-follower timeout — verified race-free under **go test -race** with concurrent load.
- Containerized a **3-node cluster** with Docker Compose; chaos-tested failure behavior via **docker stop**, uncovering and documenting a DNS-resolution failure mode and a full-data-loss-on-restart limitation (no WAL).
- Documented the consistency/availability trade-offs and a production hardening path (Raft-based leader election, WAL-based crash recovery, key-hash sharding) — *not yet built; scoped as future work*.

Online Fitness Rehab Coaching Platform

Firebase, Codex

- Built and deployed a **full-stack Firebase web app** end-to-end — UI, backend data model, and hosting — to streamline **online fitness rehab** and coaching workflows, enabling coaches to send **structured workouts** and collect client feedback.
- Collaborated with **Codex** to rapidly iterate on product features and launched the app live on **Firebase within a single day**.
- Use the platform actively with **10+ coaches** and **30+ clients** to manage workout delivery, feedback loops, and rehab/coaching operations.

TECHNICAL SKILLS

Languages: Java, Go, C, C++, JavaScript, Python, Dart

Backend & APIs: REST APIs, CRUD APIs, Spring Boot, Node.js, MySQL, Firebase

Distributed Systems & Concurrency: Leader-Follower Replication, Concurrency (goroutines, mutexes, sync.RWMutex), Multi-Node Docker Compose Orchestration

Tools: Docker, Git, Postman, Oracle VBS, Android Studio, Codex

ACHIEVEMENTS

- Secured **AIR-1558** in JEE (Advanced) 2018 among approx. 2 lakh candidates.
- Won IIT Kanpur's **Outstanding Freshman Award** for exceptional performance, given to only **2 students** from the batch.
